Broomfield, CO 80021

Embedded Software Engineering Internship

I am excited to apply for the FPGA Electrical Engineering Internship at CesiumAstro for Summer 2025. As a Computer Engineering student at North Carolina State University with a strong foundation in Verilog and FPGA systems, I am eager to contribute to your team's mission of developing innovative communication systems for aerospace applications.

In my academic coursework, I have implemented various projects using Verilog, including a Kogge–Stone adder and a vending machine design. These experiences have not only solidified my knowledge of hardware description languages but also provided me with practical skills in digital circuit design and verification. Currently, I am taking a class focused on Verilog, which further enhances my capabilities in HDL-level design.

I have hands-on experience with AMD Vivado for FPGA development, allowing me to effectively design and test high-performance digital systems. I am eager to apply my technical skills in a dynamic and cross-functional work environment at CesiumAstro, where collaboration and innovation are at the forefront of your mission.

I am particularly drawn to this opportunity because of the chance to work on FPGA circuits and systems for satellite communication. The prospect of contributing to projects that involve high-speed serial interfaces, digital processing cores, and extensive testing aligns perfectly with my interests and academic background.

Thank you for considering my application. I look forward to the opportunity to discuss how my skills and experiences can contribute to the exciting work being done at CesiumAstro.

Best regards,

Connor Savugot
