Cesium Astro

105 Edgeview Dr. Suite 310

Broomfield, CO 80021

Embedded Software Engineering Internship

I am writing to apply for the Embedded Software Development Internship at Cesium Astro for Summer 2025. As a junior studying Computer Engineering at North Carolina State University, I am eager to contribute to Cesium's innovative work on satellite communication systems. My experience with embedded systems, microcontroller programming, and communication protocols makes me excited to join your team.

During my internship at Aegis Power Systems, a company that designs power supplies for military and aerospace applications, I developed a custom command-line interface for an embedded power supply running a stripped-down Linux distribution. This interface allowed remote control of the power supply using the Secure Shell Protocol (SSH), and I communicated with devices via the RS-232 communication protocol. I also gained experience working with CAN bus, which enabled real-time communication between multiple systems. Additionally, I developed my skills in Linux, Bash scripting, and Python while working in real-time embedded environments.

I am currently advancing my embedded systems expertise through ECE 306, where I am programming an automated vehicle in C, integrating real-time sensors and Wi-Fi connectivity. This hands-on project has deepened my microcontroller programming skills and provided me with a solid understanding of low-level programming, which directly aligns with the development of board support packages and low-level drivers for satellite communication systems at Cesium Astro.

I am particularly drawn to this opportunity because of the diverse technical challenges it presents and the chance to collaborate with a highly skilled team on space and airborne platforms. I am eager to apply my background in embedded software development to contribute to Cesium Astro's mission of advancing communication systems in the aerospace sector.

Thank you for considering my application. I look forward to the possibility of discussing how my skills and experience align with Cesium Astro's goals.

Best regards,

Connor Savugot
