Lenovo

8001 Development Dr,
Morrisville, NC 27560

Server Hardware Development Intern - Summer 2025

I am excited to apply for the Server Hardware Development Intern role at Lenovo. As a Computer Engineering student at North Carolina State University with hands-on experience in both hardware and software development, I am eager to contribute my skills to your team in Morrisville, NC.

While my degree is in Computer Engineering, my coursework has included significant electrical engineering concepts, such as circuit analysis and hardware design. My experience working with schematics both academically and professionally reflects my ability to navigate and understand complex hardware systems. In my embedded systems course, I designed an MSP430-controlled toy car and relied heavily on schematics to interface hardware components effectively. Additionally, during my internship at Aegis Power Systems, I conducted schematic reviews for a custom PCB that controlled a power supply running a stripped-down custom Linux distribution. This process required close attention to design accuracy and an understanding of electrical subsystems.

I also bring strong technical skills that align closely with the role's requirements. I have extensive experience with Linux systems, having used them for embedded development, scripting, and system control. My programming background includes proficiency in Python, BASH, and C, which I applied to develop automation scripts for managing embedded systems during my internship. Furthermore, my passion for hardware is demonstrated through my hands-on experience soldering and assembling PCBs, designing and implementing hardware-software interfaces, and working with microcontrollers.

What excites me most about this opportunity is the focus on server design and validation. The intersection of hardware systems like Intel x86/AMD subsystems and software-driven processes resonates with my career aspirations to bridge hardware and software seamlessly.

I would welcome the chance to discuss how my background and enthusiasm align with the goals of your team. Thank you for considering my application. I look forward to the possibility of contributing to Lenovo's innovative projects.

Best regards,

Connor Savugot
