UEFI Firmware Intern - Summer 2025

I am excited to apply for the UEFI Firmware Internship with Lenovo's Infrastructure Solutions Group (ISG) for Summer 2025. With hands-on experience in embedded system programming, proficiency in C, and a passion for low-level software development, I am eager to contribute to Lenovo's innovative firmware solutions.

My experience developing embedded systems positions me well for this role. In a recent project, I programmed a toy car using a TI MSP430 microcontroller, integrating IoT Wi-Fi control, ADC-based line-following capabilities, and PWM motor control. This project also included creating a custom LCD interface to display real-time system data, showcasing my ability to bridge hardware and software effectively. During my internship at Aegis Power Systems, I developed a custom command-line interface for an embedded power supply, utilizing the RS232 protocol and enabling real-time data exchange through the CAN bus. These experiences honed my debugging skills and deepened my understanding of hardware-software integration.

In addition to embedded programming, I have substantial experience with both Windows and Linux environments. I frequently configure and install operating systems, having transitioned one of my primary laptops to Arch Linux. My knowledge extends to UEFI, where I've modified system settings and boot sequences, demonstrating my familiarity with system initialization and hardware interaction. My coursework and personal projects have also equipped me with skills in LC3 Assembly, allowing me to understand C code execution at a lower level.

Furthermore, I am well-versed in Agile methodologies and Git for version control, which I've used extensively in collaborative projects. My strong analytical skills and methodical debugging approach enable me to address complex technical challenges effectively.

Lenovo's commitment to innovation aligns perfectly with my career aspirations. I am particularly drawn to the opportunity to work on firmware development, hardware boot sequences, and the intersection of software and hardware. I am confident that my background and enthusiasm make me a strong fit for this role.

Thank you for considering my application. I look forward to the opportunity to contribute to Lenovo's UEFI team and to discuss how my skills align with your needs.

Best regards,
