XCC Firmware Intern - Summer 2025

I am excited to apply for the XCC Firmware Internship with Lenovo's Infrastructure Solutions Group (ISG) for Summer 2025. As a Computer Engineering student at North Carolina State University, I am eager to contribute to your team's innovative work on proof-of-concept server designs and future technologies. My academic and professional experiences have prepared me to engage in firmware development, solve complex challenges, and thrive in a collaborative environment.

During my internship at Aegis Power Systems, I developed a Python-based command-line interface (CLI) for an embedded power supply, enabling remote control and hardware integration. This hands-on role sharpened my scripting proficiency and problem-solving skills while deepening my understanding of firmware and hardware interaction. Additionally, my coursework in embedded systems has enhanced my ability to design, debug, and validate software solutions for hardware platforms, which aligns closely with the technical challenges at Lenovo.

What draws me to Lenovo is the opportunity to contribute to cutting-edge projects within a team of innovative thinkers. My self-starter attitude, combined with my passion for learning new technologies, ensures I can quickly adapt and make meaningful contributions to your Firmware Development Team.

Thank you for considering my application. I am enthusiastic about the opportunity to contribute to Lenovo's success and look forward to discussing how my skills and experiences align with the XCC Firmware Intern role.

Best regards,
