Storage Hardware Development Intern - Summer 2025

I am thrilled to apply for the Storage Hardware Development Internship with Lenovo's Infrastructure Solutions Group (ISG) for Summer 2025. With my strong foundation in Linux and Windows operating systems, hands-on programming experience, and passion for computer architecture, I am eager to contribute to the External Storage Development team's mission to create enterprise-grade storage solutions.

During my internship at Aegis Power Systems, I developed a Python-based command-line interface (CLI) for an embedded power supply, showcasing my scripting skills and ability to manage complex hardware interactions. Additionally, I gained significant experience using Bash for automation, and I have a deep understanding of the Linux command line, as I daily drive Arch Linux on one of my laptops. My experience also includes installing and configuring operating systems, including Windows 11 on non-standard hardware like a Chromebook and VirtualBox hypervisors for personal and academic projects.

In my coursework, I have furthered my technical expertise by designing an Arithmetic Logic Unit (ALU) using Verilog, which incorporated Serial-Input-Parallel-Output (SIPO) and Parallel-Input-Serial-Output (PISO) buses, as well as Binary-Coded Decimal (BCD) arithmetic. My projects have strengthened my understanding of computer architecture and hardware-software integration. Moreover, my internship at Team Industries involved extensive use of Excel, where I wrote VBA scripts and formulas to automate processes and ensure product specifications were met.

Lenovo's innovative work in enterprise storage and partnerships with industry leaders like NetApp and Broadcom deeply resonate with my career aspirations. I am particularly excited about the opportunity to develop tools for firmware versioning, process automation, and customer proof-of-concept documentation, as these align with my technical writing and software development skills.

Thank you for considering my application. I would welcome the chance to bring my enthusiasm and technical skills to Lenovo's ISG team. I look forward to the opportunity to discuss how my background aligns with the Storage Hardware Development Internship.

Best regards,

Connor Savugot
