SSEP - STEM Student Employment Program

I am writing to express my enthusiastic application for the SSEP Internship at NAVSEA. As a Computer Engineering student at North Carolina State University, I am eager to apply my technical skills and passion for embedded systems to contribute to your innovative projects supporting the U.S. Navy.

My fascination with embedded systems is driven by the intricate relationship between hardware and software, which I believe is essential for advancing defense technologies. Currently, I am enrolled in ECE 306, Introduction to Embedded Systems, where I am engaged in designing and programming an automated vehicle equipped with line-detection sensors and Wi-Fi capabilities using C. This coursework has enhanced my practical skills and deepened my commitment to a career in embedded engineering.

During my recent internship at Aegis Power Systems, I developed a custom command line interface for an embedded power supply running a stripped Linux distribution. This role required me to utilize communication protocols effectively, particularly over the CAN bus, and furthered my understanding of serial communication and Linux environments. This experience has equipped me with the hands-on skills necessary to support NAVSEA's commitment to cutting-edge technology and mission success.

I am particularly drawn to NAVSEA's focus on innovation and national security. The opportunity to work alongside experienced engineers on projects that directly impact defense capabilities is incredibly appealing to me. I am eager to bring my programming expertise in C, C++, and Python, as well as my solid foundation in embedded systems, to your team.

I am confident that my background, coupled with my dedication to learning and problem-solving, makes me a strong candidate for this internship. I look forward to the opportunity to discuss how I can contribute to NAVSEA's mission and grow as an engineer.

Thank you for considering my application. I hope to hear from you soon to discuss my candidacy in more detail.

Best regards,

Connor Savugot
