Shield AI

16240 Gateway Path, STE 100,
Frisco, TX 75033

Embedded Software Engineering Internship

I am excited to apply for the Embedded Software Engineering Internship at Shield AI for Summer 2025. As a Computer Engineering student at North Carolina State University, with a passion for embedded systems and a strong interest in defense technology, I am eager to contribute to Shield AI's mission of protecting service members and civilians through advanced, intelligent systems.

During my summer 2024 internship at Aegis Power Systems, I developed a custom command-line interface for an embedded power supply running on a stripped Linux distribution. This project gave me hands-on experience with embedded systems, where I utilized communication protocols such as CAN bus and worked closely with cross-functional teams of electrical and mechanical engineers. The opportunity to collaborate on real-time systems and solve complex challenges has fueled my passion for embedded software development.

Building on this experience, I am currently enrolled in ECE 306, Introduction to Embedded Systems, where I am designing and programming an automated vehicle with line-detection sensors and Wi-Fi capabilities using C. This coursework is further deepening my understanding of real-time software and hardware interaction, a skill set that I am eager to apply to Shield AI's cutting-edge UAV technology.

What excites me most about Shield AI is the opportunity to work on real-time software that controls advanced UAVs, and the potential to contribute to a project that directly supports life-saving operations. I am confident that my background in C, C++, and embedded systems, coupled with my passion for high-reliability aerospace hardware, makes me a strong fit for this role.

I am eager to learn more about how I can contribute to Shield AI's innovative solutions and look forward to the opportunity to discuss my candidacy. Thank you for considering my application.

Best regards,

Connor Savugot
