

Future Goals for my Resume

I have looked forward to coming to NC State for a long time. A significant reason for that is the many wonderful opportunities available here to help me learn and develop important skills, ultimately making me more prepared for a successful career in computer engineering. Since getting here, I have made many connections with other engineering students, although most of them are freshmen, the same as me. I look forward to building more connections, not only with other students but also professors. I would really love to help a professor conduct research, especially if it was on a topic that interested me.

NC State offers many different opportunities I would like to take advantage of. Some of these are even when off of school for the summers. Growing up in a rural hometown, I was very interested in the opportunity to intern through Rural Works during the summer. They actually offer an internship in my hometown. I reached out to them this morning to see which company it was with. We have three: TEAM, Snap-On, and MOOG. I have actually interned for TEAM the last two summers and would love to do it again, especially if I can make \$25 an hour.

NC State also offers an EYE (Engineer your Experience) fund to help financially support its students in different experiences. I plan on applying for this to help pay for certification tests. I know Excel, Visual Basic, and Matlab pretty well. With a week or so to study, I feel totally prepared to take a certification test in each of them. The main reason why I have yet to become certified is because of the cost. If EYE is willing to fund this, I would love to add these certifications to my resume.
