EDUCATION

Murphy High School
Class of 2022
Class Rank: 8th of 81
Weighted GPA: 4.56
Unweighted GPA: 4.0

ACADEMIC ACCOMPLISHMENTS/HONORS

- “A” Honor Roll each semester
- AIG - Academically Gifted Program Participant Since 5th Grade
 - The AIG program provides a more challenging curriculum. The AIG program encourages students to reach beyond their expectations of themselves and offers students opportunities for growth. This rigorous academic path cultivates academic, intellectual, and character growth.

2018-2019

- High Mastery Award in American History
- Highest GPA in English I
- High Mastery Award in English I
- High Mastery Award in Honors Math 2
- High Mastery Award in Environmental Science
- Honorary Member of the Debate Team
- 2018-2019 Community Service Award
- Mastery Honor Roll for Achieving Academic Excellence at TCEC 2018
- Mastery Honor Roll for Achieving Academic Excellence at TCEC 2019

2019-2020

- Adobe Photoshop Certification
- Adobe Illustrator Certification
- No academic awards were awarded for the 2019-2020 school year

2020-2021

- No academic awards were awarded for the 2020-2021 school year

2021-2022

- Drone Commercial Pilot's License
- Murphy High School Best In Show Top Dog Award for earning a weighted GPA of 4.0 or higher for Fall 2021 Semester
- MHS WHO's WHO
- MHS Class of 2022 North Carolina Scholars
- MHS Class of 2022 Summa Cum Laudes

ACADEMIC HONOR SOCIETIES

Beta Club

- Member since 6th grade
- President during my 8th grade year
- Toys for Tots
- As a Beta Club member, I have worked hard to keep my grades as high as possible. I have achieved a 4.0 unweighted GPA. Through the Beta Club I have participated in several community service projects such as Toys for Tots, trash pick-up, and donations for a local animal shelter.

Murphy High School Chapter of the National Honor Society

- New Club Member
- Event Coordinator for Thanksgiving Dinner for 41 Needy Families

National Society of High School Scholars (NSHSS)

- Member since 2020
- Participated in the NSHSS Research Paper Scholarship

HIGH SCHOOL ACTIVITIES

INTERACT Club

- VP
- Senior year

This club was initiated in my school my Senior year. We have focused on community service activities. As a club we planned a community service project to provide Thanksgiving dinner to 41 families. We worked with community leaders, churches, and merchants to raise enough money to purchase enough foods to provide 41 families with a full Thanksgiving dinner. The Thanksgiving dinner boxes included a full sized frozen turkey, rolls, mashed potatoes, gravy, macaroni and cheese, green beans, creamed corn, stuffing, cranberry sauce, and apple and pumpkin pie. Since Thanksgiving we

hosted a school wide canned food drive. The canned food was then donated to needy families throughout our school.

Student Government

- Vice-President of Senior Class
- Club member

I work to represent the needs and wants of our class within the rules and regulations of the school system. We try to leave a lasting impression by making school improvements for the betterment of the student body in ways respectful to the school leaders.

STEM/Robotics Club

- Club Co-Captain
- Help guide the team in assembling and programming the robot
- Won 3rd Place in regional Robotics Competition

I helped lead a team to design, build, and program robots to perform specific tasks. We worked together to utilize a variety of engineering techniques to create a robot capable of participating in competitions. We placed 3rd in the regional robotics competition. I would have loved to continue participating in this club, but COVID caused the club and the competitive events to dissolve.

Future Farmers of America (FFA)

- Club Member

My participation in the NC State SATELLITE Camp inspired me to join this club. I have always helped my grandparents on their farm. I have spent summers in the garden laying off rows, planting seeds and seedlings, pulling weeds, watering, and fertilizing plants. I have spent many hours shucking corn and stringing beans. The summer I participated in SATELLITE, our summer project was to grow our own garden. My little yard garden was very successful. I grew cucumbers, beans, tomatoes, peppers, sunflowers, cantaloupe, and watermelon in a little 4 x 4 raised bed. We grew so many cucumbers, we had to pickle them. We had so many peppers, we put them in the freezer and have used them for everything from meatloaf to stuffed peppers to Philly cheesesteaks. This club has been just a little disappointing in the lack of activity, but I keep holding out hope that we will plant some seedlings to sell this spring.

CODING Club

- Founding Member
- Senior year

As a club, we are working through a Harvard University advanced coding curriculum. We are learning coding techniques that are more advanced than the Code.org curriculum

we are learning in school. Although it is a challenge, the lessons are very informative. I am thankful for the opportunity to participate in this learning opportunity.

COMMUNITY SERVICE

Big Brothers Big Sisters

Junior Year 13 hr

Senior Year 22 hr

Contact: Gloria Dockery 828-361-0989

What did you contribute:

This has been a challenging community service experience. I went through a lengthy interview process to participate in this program. Each week I spend at least one hour mentoring a middle school student. Every week I try to think of a different learning activity we can work on together. I want to keep him engaged and excited about learning by making learning fun. We use a variety of robots and coding interfaces to accomplish different tasks.

STEM Promotion

Senior Year 6 hr

Contact: Greg Boehm 828-835-4000

As a student representative, I spoke with the administration of TEAM Industries and local high school teachers from Clay County Schools. During this presentation, I explained the importance of STEM activities and student involvement. The presentation also helped reinforce the importance of partnerships between schools and local industries. This program allowed the teachers and industry leaders to see how a student active in STEM activities could become a successful member and leader within engineering industries locally and afar.

Shoes for Orphan Souls

Freshman Year 40 hours

Contact: Brent Manion 423-629-8900

I educated my family, church, and school communities about the work of Buckner International and the importance of children in need having good shoes to wear. I organized a shoe drive to collect shoes for children in need. The shoe drive was sponsored by Moody Radio of Chattanooga. I collected 100 pairs of shoes, which we packaged and took to the Moody Radio Station in Chattanooga, TN. The shoes were packed onto a transfer truck and shipped to Buckner international headquarters in Texas. The shoes were then distributed to orphans and other children in need throughout the world. This project taught me the value of a simple pair of shoes. Throughout the world, there are children dying of foot infections from the lack of a pair of shoes. There are children who are missing out on an education because they are not

allowed to attend school without shoes. When the shoes are delivered to these children they not only receive shoes, they are also told of the Good News of Jesus Christ.

Cat in the Hat

Junior Year 8 hours

Contact: Tammy Ott 828-361-4239

I actually dressed up as the Cat and read Dr. Seuss's books to elementary school kids. My goal was to promote childhood reading for Read Across America. I not only read the children Dr. Seuss books, I also made them some Lorax-shaped cookies. I learned that children can easily become excited about reading...or maybe they were excited about the Lorax cookies.

Sports Team Assistant

Freshman 18 hr

Sophomore 20 hr

Senior 8 hr

Contact: Peggy Cook 828-360-5335

I have helped with my sister's volleyball and softball games. I have set-up and worked the concession stand, ran the scoreboard, took money for admissions, cleaned the gym, and any other task they needed. I have worked the annual Fall Festival hotdog stand to help my little sister raise money for school functions. These experiences helped me more than my sister. Through helping her, I was able to spend time with my old friends and allowed me to make new friends. I also learned how to work with the public and how to deal with happy customers and, on occasion, grumpy customers. I also learned the importance of picking up after myself and not leaving a mess for others to clean up.

Cure International

Junior Year 20 hours

Contact: Justin Narducci (President & CEO) (616) 512-3104

Over Christmas break, I lead a fundraiser for Cure International. Cure International is a Christian organization that provides surgeries for children with physical deformities and birth defects. This charity not only provides surgery for these children and support for their families, but the love of Christ is also shared with each of these children and their families while in the care of Cure. My initial fundraiser raised \$300 to go towards a surgery. Each surgery costs \$1,000. My goal, which I eventually achieved, was raising \$1,000 to help pay for the surgery and recovery of at least one child. I feel if I could help just one child have a better life, this child's life could impact countless other lives. The effect would not only be because this child would be out of pain and no longer ridiculed by

their village, but also because this family may accept Christ as their savior and go on to share with others.

Compassion International

Freshman 12hr

Sophomore 12hr

Junior 12hr

Senior 12hr

Contact: Dan Mangan 800-336-7676

When I was in fourth grade, I began to sponsor a child in Ecuador. A monthly donation is given to meet his educational and daily needs. An extra donation is given at Christmas and his birthday to provide a gift for each of these occasions. I try to write to him as much as possible. Since taking Spanish, I have tried to write to him in Spanish, but I am much better at writing to him in English. There are interpreters who interpret my English letters for him. Sponsoring David has helped me not only learn more about how children from Ecuador live, it also helps me think of the needs of others before myself.

Methodist Church Youth Group

Junior hours: 10

Senior hours: 13

Contact: Davis Bryant 828-837-0160

Through this youth group, I performed a variety of community services. I helped with the 1st-3rd grade Vacation Bible School. I not only helped with arts and crafts, but also with the lessons in the classrooms. I worked one-on-one with some of the children that had behavioral issues. I also worked with this group to clean the stadium after the high school football games. I occasionally helped with the concession stand, but I usually picked up trash and cleaned the stands after the games.

Beta Club

Senior: 4 hours

Contact: Amy Brown 828-837-2426

Through the Beta Club we sponsored Freshmen Move-Up Day. This day was intended to help orient future Murphy High School (MHS) freshmen to the school. I spoke to the students about some of the classes I have taken at MHS. I also told them some of the school procedures and gave the students and their parents a tour of the school. This was intended to help ease these students' transition from middle school to high school.

Math Tutor

Sophomore: 250 hours

Junior: 120 hours

Senior: 90 hours (stopped counting hours when started getting paid)

Contact: Ray Swanson 828-837-6810

I LOVE math! I also love seeing that “ah-ha moment” when you can see that someone finally understands how to work their math problems. I spend MANY hours during and after school tutoring students in math. Although I help many students face to face at school, much of my high school experience has been spent in quarantine. During this time, I used my phone to walk kids through both high school and college math. If they did not understand through verbal instruction, I would FaceTime them and show them the steps to solving various types of math problems. This year, my college math instructor (I am dual-enrolled in high school and college) has recognized my math tutoring skills, and has now offered me a paid position at the college for math tutoring. I have only started getting paid within the last few months, and have not counted them toward my volunteer work hours.

WORK EXPERIENCE

Tri County Community College (January 2022)

I have recently been hired as a college math tutor for Tri-County Community College Students. My college math professor recommended me for this position. I am now getting paid for 10 hours per week to help tutor college students with their math assignments. I am getting paid to do what I love! How great is that?!

TEAM Industries (Summer 2021)

TEAM industries afforded me the opportunity to spend the summer as a paid intern. During my first few days, I learned to read a micrometer. I spent much of the summer sorting and organizing parts then creating spreadsheets with over 17,000 entries to catalog tools used to create parts, associate parts with vendors, locate tools, and associate operation and part numbers with the parts. The engineers allowed me to sit in on meetings to determine how to make a new part, time needed to create the part, and pricing of a new part for a specific vendor. I also participated in troubleshooting sessions where the engineers attempted to create a better workflow with less room for errors when manufacturing parts. I reorganized and relabeled TEAM merchandise, then created a pricing and location spreadsheet to make it easier to keep track of the merchandise. Developing an accounting spread to track prices of raw materials needed to create parts. I learned much in this internship and I am very grateful to the wonderful people I worked with for sharing their knowledge and skill sets with me.

Mike Adams' Plumbing (Summer of 2012 through 2020)

During the summers I work as a plumber. I feel that spending my summers on construction sites has taught me much. Not only have I learned valuable engineering skills, I have also learned valuable life skills. I can plumb a slab, rough-in a house, and do the set-out. The set-out means that I can install all of the fixtures such as sink faucets, shower faucets, toilets, laundry tubs, etc. Although these practical life skills are important, I have learned many character qualities. I have learned the importance of working hard, not only for my boss, but for the homeowner. Both pay for an honest day's work, and that is what I should provide them. I have learned to work with others who are not always having the best day. Dealing with and working with different personalities is an important part of life. I have learned the importance of getting paid for what you do, but not overcharging people just because you can. I feel the life lessons are as important as the skills I have learned.

SPECIAL ACTIVITIES

NC State SATELLITE Summer Camp (May 13, 2020)

- This camp was designed to be an on-campus STEM experience
- Covid quarantine caused this program to be online
- I learned about NC State's Engineering Programs from program participants and professors
- I learned how to plant a garden because we had to plant seeds as part of this program.
 - Seeds turned into seedlings
 - Seedlings Planted
 - Fruits and vegetables harvested
 - Excess vegetables were preserved through canning

National Speech and Debate Association

- Member Freshman Year
- Local Club dissolved after Freshman year
- Member of the TCEC Honorary Debate Team

Mock Trial

- Participated and won a mock trial
- Juliana v. United States - Our Children's Trust

OTHER INTERESTS

I truly enjoy going to church. I cannot relate any major accomplishments except for the most important event in my life, which was to accept The Lord God as my Savior. I participate in Youth, and VBS, as well as attend church services. I have recently attended

and enjoyed Alpha, a youth program with a local church. I truly enjoy this wonderful time of fellowship with my friends and with God.

I enjoy hunting or fishing with my grandfather when we have time. The time to hunt and fish is not as available as it once was. It seems I am pulled in a million different directions as I have gotten older.

Like most teens, I enjoy hanging out with my friends. We try to attend all of the home football games together. We enjoy talking, teasing, and being together. One of my best friends is from Spain. She attended my high school through a foreign exchange program. We love to compare cultures, family, food, and languages.

I would be remiss if I did not mention my LOVE of solving problems. I love to solve Rubik's Cubes. I enjoy figuring out how to fix broken machines. Building complex machines makes my heart happy. Building and programming robots to perform specific tasks brings me joy. I love figuring out how things work and how to repair broken machines.
